

In recent years gas prices have soared, hurting America's working families and small businesses. As a county we must free our dependence on foreign oil. This will create new jobs and bring down the price of oil, while improving our environment.

John believes that it is vital to our national security to curb our dependence on foreign oil by investing in self-sufficient renewable energy programs. Finding and implementing new sources of energy is not only important for our country, but for will save energy costs for middle class families, seniors and small businesses. Investing in alternative energy will create "green-collar" jobs and bring down the price of gas and electricity. John will work to incentivize more efficient and environmentally sound energy policy.

John is deeply committed to preserving the many natural treasures of New Jersey's 3rd District. An investment in our environment today will leave an invaluable legacy for our children and grandchildren to enjoy. From maintaining our beautiful coastlines to preserving the Pine Barrens, every person in the 3rd District can benefit from sound environmental policy.

John authored an amendment to the National Water Research and Development Initiative Act which will help improve the health of Barnegat Bay by developing technologies and practices to clean up the water quality of the bay.
